

Process Safety Management Foundations

Course duration - 2 days

What is it?

A two-day training course covering the identification, evaluation and prevention of accidents and incidents, as a direct result of failures in equipment, processes and procedures.

All employees working in high hazard industries need to understand the safety, health and environmental hazards associated with their working environment.

The Process Safety Management Foundations course provides the fundamental knowledge and understanding of the principles of process safety management across the entire organisation.

How is it delivered

The training can be delivered on-site to groups of up to 12 delegates. For individuals or smaller groups we run open courses across the UK. Following the course all delegates are registered for an online assessment designed to reinforce their knowledge and understanding of process safety management and demonstrate their competence in the subject. Cogent certificates, recognised by the PSMCPB, will be awarded to all who pass.

Who should attend?

The course is aimed at managers, supervisors, designers, safety personnel, and senior contract employees.

It is also suitable for young engineers and anyone who would like to develop a more detailed understanding of process safety management.

A very effective and useful course. The trainers were fantastic, very patient and knowledgeable. Thank you for making it so interesting and the enthusiasm employed.
Andrew Williamson,
Indorama

The course is delivered by highly experienced Cogent Assured Training Providers. A combination of presentations, case studies and group discussions are used to illustrate interpretations of process safety management requirements and demonstrate ways to develop and monitor an effective process safety programme.

This course can also be delivered via a blended learning option.

Who are Cogent Skills?

Cogent Skills has been helping companies in high-hazard industries to keep themselves and their employees safe for over 20 years. As a member of the UK Process Safety Management Competence Programme Board (PSMCPB) Cogent works alongside leading stakeholders, including regulators to design and promote the importance of safety leadership training across industry.

What will I learn?

- The benefits and key principles of process safety management
- How to identify hazards and assess the risks associated with hazardous substances and plant
- The need for effective measures to limit the consequences of a major accident
- The importance of identifying suitable safety critical equipment, implementing key risk control systems and the importance of sustaining their effectiveness
- How to apply learning from near misses
- How to monitor performance to achieve continual improvement in process safety performance

How much does it cost?

Open course

£800 + VAT per delegate

In-house course

Less than 7 delegates
7-12 delegates

£4000 + VAT
£6800 + VAT

Process Safety Management Foundations course is part of the Process Safety industry training standards*

The videos shocked me as to how easy it was to have an accident and made me aware of the importance of process safety. The course was very beneficial, I have gained a massive understanding.

Daniel Arkle,
Chemoxy

The course syllabus matched almost exactly the level of process safety knowledge that we wanted our Process Safety Champions and Sponsors to have. In addition the course lends itself to training our next generation of process safety leadership. The Foundations course has been excellent. All attendees have been very positive and have said how much the course has increased their competence and allowed them to support the other sites in the improvement of process safety performance

Andrew Mawson,
Group SHE Manager at px Group

* The training standards have been developed for industry by industry as a national framework for continuing professional development (CPD) in the process industries.
