

## General Overview

- ✓ Level: 3
- ✓ Duration: 36 - 42 months
- ✓ Funding band: £26,000
- ✓ Entry requirements: 3 GCSE's at Grade C or higher including Maths, English & Science

MOET covers seven roles including Electrical Technician, Control and Instrumentation Technician and Mechanical Technician and is aimed at ensuring the Apprentice learns how to maintain the safety, integrity and effective operation of plant and equipment.

Upon completion the Apprentice will be competent in their working environment and be able to demonstrate:

- Experience in the operation and maintenance of plant and equipment specific to their role during both fault and operating activities
- An operational understanding of industry health and safety, and environmental working practices and regulations
- Knowledge of engineering principles and theories relevant to their role

Knowing that your apprentice is on track is important and that is why SIAS offers its highly regarded Tracker document and Competence Evaluation Log that gives both the apprentice and employer confidence as the learning progresses.

Guidance materials and individual support for training providers, apprentices and employers are provided throughout the on-programme learning. We also deliver a number of events and webinars to advise and guide across the range of apprenticeships we assess.

Download the factsheet [here](#).

As part of SIAS EPA service, we will check that all gateway evidence has been met before we begin the process of EPA.

## The EPA consists of 3 assessment methods:

1

### Knowledge assessment

- Apprentice demonstration of core technical knowledge from the apprenticeship standard

2

### Practical observation

- Observing the apprentice carrying out their job role in a working environment under normal conditions

3

### Technical interview

- Structured interview around the key elements of the apprenticeship

### Assessment Marking & Grading

The SIAS End Point Assessor, will combine the results of each individual assessment method and provide an overall assessment grade of Fail, Pass, Merit or Distinction.

### Apprenticeship Certification

Your apprentice will receive a Certificate of Apprenticeship on successful completion of all individual assessment methods.

### Guidance & Support

SIAS provide a range of resources which offer EPA guidance and support for the apprentice, the employer, and the college/training provider.

We aim help employers and colleges/training providers to support the on-going competence evaluation of the apprentices' knowledge, skills, and behaviour to ensure that your apprentice is confident for their EPA. All of our resources are comprehensively mapped to this apprenticeship standard.

We believe passionately that end-point assessment doesn't begin at gateway, it starts when apprentices start on programme. We pride ourselves on working in partnership to deliver end-to-end solutions right across the learner journey from registration through to gateway, assessment and certification.
